

TGS Data for Offshore Exploration Barbados

Why Barbados?

- Frontier offshore opportunity in a highly prospectivity area
- Located within an emerging Eastern Caribbean petroleum province
- Large regional seismic framework already available and ready for evaluation
- Opportunity for early technical positioning ahead of future activity
- Government actively advancing offshore investment discussions

TGS offers an extensive portfolio of offshore geoscience data covering Barbados and the broader Eastern Caribbean, ready for immediate licensing and exploration evaluation.

Data Coverage

TGS Data for Offshore Exploration Barbados

Regional Coverage Advantage

- Extensive 2D seismic coverage across the Eastern Caribbean
- Modern broadband reprocessing products
- Regional basin understanding and play evaluation
- Tie opportunities to neighboring exploration trends in deep water T&T and Guyana

Supporting Exploration Decisions

TGS supports governments and industry partners with high-quality geoscience data designed to reduce exploration risk and improve regional understanding. Whether evaluating acreage, identifying leads, or conducting basin-scale studies, TGS regional coverage provides the technical foundation for informed exploration decisions.

Ready to Evaluate?

The existing coverage allows companies to rapidly screen acreage, evaluate petroleum systems, and identify areas for future detailed exploration. Data can be licensed immediately.
